Pouillet's law (Resistance and conductivity):
 $R \cdot A = \rho \cdot L$
 R: Electrical resistance of material
 ρ: static resistivity Ohm/Meter
 L: length of the conductor (Meter)
 A: cross section mm²

This table provides an indication for the cable section and cable length. Always recalculate for each specific situation and circuit.

Installation: Low power + short cables
 Use the sum of the total power consumption for the calculation of the cable section.

Installation: High power + short cables
 Use the total power consumption of each line separately for the calculation of the cable section.

Installation: Low power + long cables
 Use the total power consumption of each line separately for the calculation of the cable section. Divide the power equally over the lines.

Installation: High power + long cables
 Use the total power consumption of each line separately for the calculation of the cable section. Divide the power equally over the lines.
